Interface Leads

Product description

VDA cable 68742 for
Saab 9.3 Sport

Interface Leads are used for car stereos with a Line-In function or VDA preparation. It enables the use of the car speakers when answering/making calls from your cell phone. Thereby using the radios build-in mute function.

Speaker-function: This is achieved by connecting the carkit directly to the cars Line-In input/VDA connector. By using the radios built-in relays the telephone conversation is send through the car speakers while the radio is muted. This way you will achieve a perfect hands free sound without interference from the car radio.

For a complete cable-set two item no. is required. The first is a car-specific Interface Lead. The second is a carkit-specific Interface adaptor cable .

Power supply of the carkit: All Interface Leads are delivered with a power connector for the carkit, that way you avoid cutting the cars wiring loom.

Please check the radio instruction manual for special issues regarding the connection and set-up of the radio, when connecting a carkit.

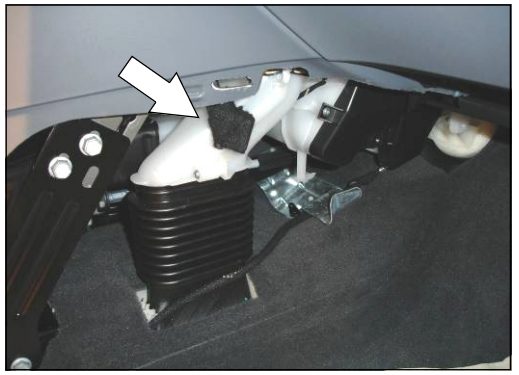
Interface Leads

Installation description

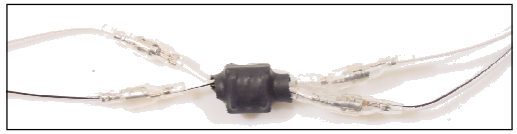
VDA cable 68742 for
Saab 9.3 Sport

Connect the VDA cable to the VDA connector. The VDA connector is normally found behind the passenger side kick panel (LHD), behind glove compartment or climacontrol panel. Connect the other end through a carkitspecific interface adaptor to the carkit.

SAAB 9.3 normally has the VDA plug placed behind the passenger kick panel on the center consol wrapped in tape.



Please install the small Coil between the bullets on the white and white/black wires on the interface cable. Without this coil the sound will be distorted.



After the installation you must adjust the phone volume to its middle position and then adjust the conversation sound level according to the description in the radio manual.

When the VDA cable is installed it will redirect your call through the cars front speaker.

Please remember to use a carkit interface adaptor cable to connect the carkit to the VDA cable.
